

UNDERWATER TREADMILL SYSTEM HYDROTHERAPY & EXERCISE

EARLIER INTERVENTIONS, EFFECTIVE OUTCOMES

AQUACISER III UNDERWATER TREADMILL SYSTEM

The AquaCiser III Underwater Treadmill System is designed to provide hydrotherapy with aerobic exercise, providing a high-resistance, low-impact aerobic workout. An excellent choice for hospitals, sports medicine or physical therapy facilities and nursing homes.

Patient access into the AquaCiser is exceptionally easy with the water remaining in the storage reservoir until the patient is comfortably situated in the exercise chamber. Water depths are customizable from 12" to 48" allowing the patient to have a wide range of weight displacement while progressing in therapy with 360° of resistance for all movements.

Although water is 790 times denser than air, it is possible to prescribe therapeutic exercise at a relatively vigorous and intense level with a very protective environment.
